

FREQUENTLY ASKED QUESTION

Question: Why does the numlock keep going off?

Answer: A glitch in Microsoft Office. You can load our numlock monitor program on any or all workstations. Basically it monitors the state of numlock, and if ever it goes OFF it immediately turns it back ON.

If you want to kill the program and return the numlock to “normal” press the “windows” key and “q” (WIN-QUIT)

Download from [here](#) and save to your Windows Startup folder, and enjoy.
